

TEST EQUIPMENT FOR ZME DOSING VALVE APPLIED ON BOSCH CP1H
AND CP3 PUMP

P.N.:555-ZME

- Trial time;
- + Precision;
- Supplied charts;
- Possibility to compare different P.N.

The equipment tests ZME dosing valve applied on CP1H and CP3 pump through the delivery pump and the test bench measuring graduate.

The test liquid flow which is obtained by applying 1 Bar pressure; through the "555" tester and the "ACME07" software, it will be able to outline a delivery-current characteristic curve describing electro-hydraulic behaviour of ZME regulator; no test bench is required as supplied regulator charts help to accurately detect any regulator fault. Through the curves featured in the charts you may compare models with a different per number while saving money and time .
